Manufacturing Process – Statement

The evaporated salt produced by Schweizer Salinen AG is a product composed entirely of minerals. The manufacturing process comprises the following steps:

- Extraction of saturated brine via underground leaching (solution mining)
- Purification and treatment of the brine (lime-soda process)
- Evaporation and crystallization
- Drying
- Sieving and grading

No organic solvents, no animal or plant-based ingredients, no fragrances, or other organic additives are used throughout the entire production process.
